About us

Indian Institute of Information Technology, Design and Manufacturing, Kancheepuram (IIITDM, Kancheepuram), setup by the Ministry of Education in 2007 is as an Institute of National Importance with a vision to promote creative and knowledge intensive products and processes in the manufacturing sector. It is located in the proximity of the industrial clusters in Chennai and UNESCO heritage sites such as Mahabalipuram and Kancheepuram. IIITDM Kancheepuram offers B.Tech, Dual-degree, MTech and Ph.D programmes in Computer Science and Engineering, Electronics and Communication Engineering, Mechanical Engineering along with M.Des/Ph.D in Integrated Product Design. IIITDM Kancheepuram has secured 8th rank in the NIRF innovation ranking 2023 category.

School of Interdisciplinary Design and Innovation (SIDI)

The School of Interdisciplinary Design and Innovation (SIDI) was created in November 2020 to give thrust to the design-centric education mandate of IIITDM Kancheepuram. SIDI draws its motivation from two major developments that have impacted the education sector in the year 2020 –the fault-lines in the prevalent teaching/faculty-centric model of education and the National Education Policy 2020 that created possibilities for developing new student- centric networks of learning and innovation.

SIDI offers programs in Product Design at multiple levels. Undergraduate students are offered a series of courses called Design Spine and a Minor in Design while at Postgraduate level a Masters in Design course is offered in Integrated Product Design.

SIDI also offers a PhD in Integrated Product Design. All the courses and programs are carefully curated to promote the spirit of learning by doing and promote student-led innovation through vertical integration across the semesters. SIDI programs are periodically reviewed and guided by a Design Advisory Council comprising eminent and leading design experts from the academia and industry.

M.Des. in Integrated Product Design

The purpose of M.Des. program in Integrated Product Design is to produce design leaders who have the courage and confidence to identify, and resolve paradoxical challenges through creative, smart and contextually relevant products.

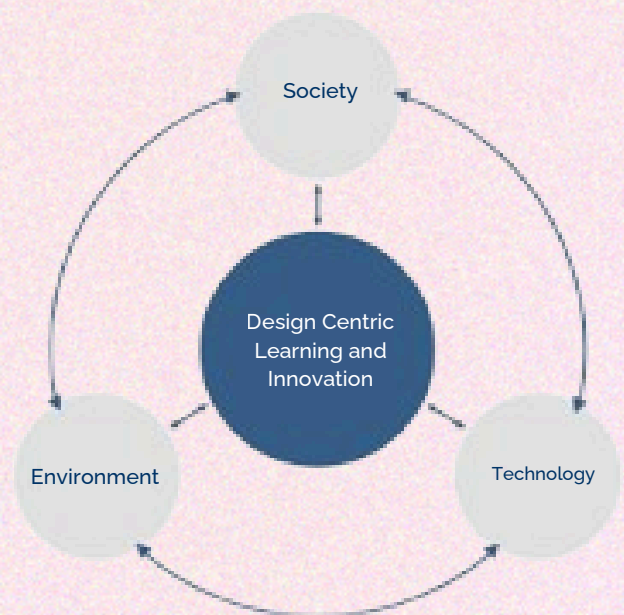

Program objectives

- To nurture curiosity, aesthetic sense, creative confidence, and self-driven learning.
- To cultivate critical thinking, socially conscious and environmentally responsible behaviours.
- To develop the courage and ability to lead change and demonstrate design leadership.
- To encourage product innovation in areas that can lead to Atmanirbhar Bharat.

Key principles informing curriculum design

Integration of Learning and Innovation

- A two-week foundation course at the beginning of the program to help students rediscover their creative selves, set goals, and take ownership of their learning.
- The program lays strong emphasis on experiential learning with the courses guiding and allowing students to practice the theory taught. Whole-body engagement through sketching, model making, and reflexive narratives helps to cultivate the qualities of presence, responsiveness, and improvisation in a context.
- There exists a choice for students to either dive into depth or widen the breadth of their areas of interests.
- Vertically integrated projects across semesters to encourage product innovation with a scope to incubate products in MaDeIT Innovation Foundation.

Integration of design with technology, society and environment

Exposure to digital tools and AI for generative designs, emerging technologies (Kinetic Art, Electric Vehicle, Wearables, Context-Aware), Strategic Management of Design & Innovation and Sustainable Product-Service Systems.

Curriculum

The two year program is conducted in 4 semesters as shown below.

The courses in the first two semesters are designed to aid the concept and embodiment design projects of the students. The course delivery will be coordinated by faculty to ensure that they add value to the students and their projects. The courses will also be augmented by a series of workshops with external experts. The students will be encouraged to leverage the power of digital tools from the second semester.

As a policy, the school will encourage students to mix and match open-source tools. An overview of industry grade tools will be provided through workshops. The vertical specific electives will help the students understand practices in specific industries of interest. A full semester internship provides an option for the students to experience product development in the industry or develop their own product/startup or work on faculty-led products. Internships will be co-supervised by the faculty.

The evaluation process will include class assignments, project reviews by industry mentors and an external jury, and reflection on their experience and theoretical concepts. The assessments will look into the ability of the student to produce highest quality of work with available tools. The internship report will require the student to reflect on his/her participation and the process of product development in the chosen context. The final project evaluation will not only assess the product prototype, but also a thesis where the student is expected to reflect on his/her experience in design and innovation vis-à-vis the theoretical concepts learnt. The above activities are expected to challenge the thinking of students and instill the spirit of action research.

Placements:

Our students have secured placements across a diverse range of startups and established design organizations. Some of the notable companies include:

Design Studio

The design studio is a 6000 sq ft. environment equipped with design and prototyping tools and collaborative working space to support learning by doing.
