Course Name	Calculus	Course Code	MA1000			
Offered by Department	SH -Mathematics	Structure (LTPC)	3	1	0	4
To be offered for	B.Tech	Course type	Core			
Pre-requisite	NIL	Approved In	Senate-43			
Learning Objectives	The course will introduce the student to basic concepts in Calculus such as convergence, differentiation & integration and its applications.					
Contents of the course	• Limit and Continuity of functions defined on intervals, Intermediate Value Theorem, Differentiability, Rolle's Theorem, Mean Value Theorem, Taylor's Formula (5) • Sequences and series (7) • Definite integral as the limit of sum – Mean value theorem – Fundamental theorem of integral calculus and its applications (9) • Functions of several variables – Limit and Continuity, Geometric representation of partial and total increments Partial derivatives – Derivatives of composite functions (8) • Directional derivatives – Gradient, Lagrange multipliers – Optimization problems (7) • Multiple integrals – Evaluation of line and surface integrals (6)					
Essential Reading	•Thomas. G.B, and Finney R.L, Calculus, Pearson Education, 2007.					
Supplementary Reading	1. Piskunov. N, Differential and Integral Calculus, Vol. I & II, Mir. Publishers, 1981. 2. Kreyszig. E, Advanced Engineering Mathematics, Wiley Eastern 2007. 3. J Hass, M D Weir, F R Giordano, Thomas Calculus, 11th Edition, Pearson.					

Course Name	Engineering Electromagnetics	Course Code	PH1000			
Offered by Department	SH -Physics	Structure(LTPC)	3	0	0	3
To be offered for	B. Tech	Course Type	Core			
Pre-requisite	NIL	Approved In	Senate-43			
Learning Objectives	The objective of this course is to give an idea how the electromagnetic wave behaves. This also provides an understanding of theories of electrostatics, magnetism and electrodynamics with their applications. It will enhance the problem solving capacity of the student.					
Contents of the course	• Vectors - an introduction; Unit vectors in spherical and cylindrical polar co-ordinates; Concept of vector fields; Gradient of a scalar field; flux, divergence of a vector, Gauss's theorem, Continuity equation; Curl – rotational and irrotational vector fields, Stoke's theorem. (12) • Electrostatics: • Electrostatic potential and field due to discrete and continuous charge distributions, boundary condition, Energy for a charge distribution, Conductors and capacitors, Laplace's equation Image problem, Dielectric polarization, electric displacement vector, dielectric susceptibility, energy in dielectric systems. (10) • Magneto statics: • Lorentz Force Law Bio-Savart's law and Ampere's law in magneto statics, Divergence and curl of B, Magnetic induction due to configurations of current-carrying conductors, Magnetization and bound currents, Energy density in a magnetic field Magnetic permeability and susceptibility. (10) • Electrodynamics: • Electromotive force, Time-varying fields, Faradays' law of electromagnetic induction, Self and mutual inductance, displacement current, Maxwell's equations in free space. Boundary condition, propagation in linear medium. Plane electromagnetic waves—reflection and refraction, electromagnetic energy density, Pointing Vector. (10)					
Essential Reading	1. W.H. Hayt and J.A. Buck, Engineering Electromagnetics, Tata McGraw Hill Education Pvt. Ltd, 2006.					
Supplementary Reading	1. W. H. Hayt, J. A. Buck and M. Jaleel Akhtar, Engineering Electromagnetics, McGraw Hill (India) Education Pvt. Ltd, Special Indian Edition 2020. 2. Purcell. E.M, Electricity and Magnetism Berkley Physics Course, V2, Tata McGraw Hill, 2008. 3. Feynman. R.P, Leighton. R.B, Sands. M, The Feynman Lectures on Physics, Narosa Publishing House, Vol. II, 2008. Hill, 2008. 4. G.B. Arfken, H.J. Weber and F.E. Harris, Mathematical Methods for Physicists, Academic Press, 2013					

Course Name	ElectricalCircuitsforEngineers	Course Code	EC1000			
Offered by Department	ElectronicsandCommunication Engineering	Structure(LTPC)	3	1	0	4
To be offered for	BTECH	Course Type	Core			
Pre-requisite	NIL	Approved In	Senate-43			
Learning Objectives	Thiscourseaimstoequipthestudentwithabasicunderstandingofelectricalcircuitsandmachinesforspecific typesofapplications. Thiscoursealsoequipsstudentswithanabilitytounderstandbasicsofanaloganddigital electronics.					
LearningOutcomes	Thesudentsshalldevelopanintuitiveunderstandingofthecircuitanalysis,basicconceptsofelectricalmachines,andelectronicdevicesandcircuitsandbeabletoapplytheminproductdesignanddevelopment					
Contentsofthecourse (Withapproximatebreak-upofhours)	Elementsinelectricalcircuits:R,L,C,voltageandcurrentsources,Ohm’slaw,Kirchoff’sLaws (4) Networkanalysis:Nodalandmeshanalysiswithonlyindependentsources (4) Networktheorems:Superposition,Thevenin’s&Norton’s,Maximumpowertransfertheorems (4) DCCircuits:ResponseofRC,RLandRLCCircuits (6) ACCircuits:ACsignalmeasures,Phasoranalysisofsingle-phaseACCircuits,ThreephaseACCircuits (6) Machines:Transformers,DCgenerator,DCmotor,ACinductionmachines (8) Diodes:V-Icharacteristics,applications-rectifiers,clippers,claspers (2) Op-amps:gain,feedback,applications-inverting/non-invertingamplifiers,sumanddifferenceamplifier,comparators (4) Logicgatesandcombinationalcircuits–Basicgates,Karnaughmaps,Fulladder,halfadder (4)					
Essential Reading	EdwardHughes,IanMcKenzieSmith,JohnHiley,KeithBrown,‘Hughe’sElectricalandElectronicTechnology’,10 th edition,Pearson,2010					
Supplementary Reading	1. CharlesAlexanderandMatthewSadiku‘FundamentalsofElectricCircuits’7 th Edition,McGrawHill,2021 2. C.H.Roth,Jr.,LarryRKinney,‘FundamentalsofLogicDesign’,7 th Edition,CengageLearning,2013. 3. JacobMillman,ChristosCHalkais,SatyabrataJit,‘Millman’sElectronicDevicesandCircuits’,4 th Edition,McGrawHillIndia,2015 4. StephenDUMans,‘Fitzgerald&Kingsley’sElectricMachinery’,McGraw-Hill,7 th ed.2020.					

Course Name	Problem Solving and Programming	Course Code	CS1000			
Offered by Department	Computer Science Engineering	Structure (LTPC)	3	0	0	3
To be offered for	B.Tech	Course type	Core			
Prerequisite	NIL	Approved In	Senate -44			
Learning Objectives	Focus is on problem solving using computers with C programming as the language. Data representation, base conversions, arithmetic in fixed and floating point representations, and problems related to this shall be covered. The sequence, selection and repetition statements in C programming language shall be discussed with case studies. The practice component of this course shall supplement theory by providing hands-on experience.					
Learning Outcomes	The teaching and assessment shall ensure that given a computational problem, students can use computers as a tool to model and solve the problem. Writing pseudo codes and C programming using basic programming constructs are expected out of the students. Students are expected to be conversant in number conversions and representations.					
Course Contents (with approximate breakup of hours for lecture/ tutorial/practice)	• Computing Machine - Need and Applications - Evolution of Computing Machines (Calculators through Computers) Number Representation - Fixed and Floating Point - Base Conversions: Binary, Decimal, Octal, Hexa decimal number systems and conversions. (8 hours) • Basic programming constructs in C – Data types in C – Input and output statements – Formatted input/output - Control strings - return types - Case studies involving sequence statements (4hours) • Operators - Arithmetic, logical, relational, shift, unary operators - Precedence and Associativity (3 hours) • Selection Statements: IF-ELSE, SWITCH-CASE - Programs involving sequence and selection - GOTO statements - break statement - Nested IF - Switch inside if and vice-versa (5 hours) • Repetition Statements: FOR, WHILE - Programs involving sequence, selection and repetition - continue statement - Nested loops (5 hours) • Introduction to Arrays and Strings - Array manipulation - string manipulation - string operations - multi-dimensional arrays (6 hours) • Functions in C – Function declaration, definition – scope -storage Class-Built and user defined functions –Recursive functions (7 hours) • Introduction to Pointers, Dynamic Memory Allocation, Structures and File processing (7 hours)					
Essential Reading	Deitel P J and Deitel H M, C : How To Program, Prentice Hall, 7th Edn, 2012.					
Supplementary Reading	Kernighan, Ritchie D, The C Programming Language, Prentice Hall, 2 Edn, 1988					

Course Name	Materials for Engineers	Course Code	ME1000			
Offered by Department	Mechanical Engineering	Structure (LTPC)	3	0	0	3
To be offered for	B. Tech	Course Type	Core			
Pre-requisite	NIL	Approved In	Senate- 43			
Learning Objectives	- To provide overview of microstructure and properties of various engineering materials - To explore relations between performance of engineering products and microstructure, properties of materials that are used to construct them.					
Learning Outcomes	After the completion of the course, students will be able: - To explain the microstructure and properties of materials like steels, polymers, ceramics, and composites. - To understand the correlation of microstructure-properties-performance of materials so as to select suitable materials for engineering products.					
Contents of the course	- Classification and evolution of engineering materials, crystal structure, defects, crystallographic planes, directions, slip, deformation mechanical behavior, strengthening mechanisms, microstructure and properties of metal alloys (12) - Properties and processing of polymers, ceramics and composite materials, microstructure-property relationships (9) - Electrical, electronic and magnetic properties of materials, microstructure-property relationships (6) - Introduction to Nano, Bio, Smart and Functional materials. (3) - Introduction to selection of materials, Product based case studies on microstructure-property-performance of materials in the design of automobile; aircraft structures; e-vehicles; energy storage; electronic, optical and magnetic devices; and biomedical devices. (12)					
Essential Reading	- William D. Callister Jr., David G. Rethwisch, “Materials Science and Engineering: An Introduction”, 10th Edition, Wiley, 2018. - Michael Ashby, Hugh Shercliff, David Cebon, “Materials – Engineering, Science, Processing and Design”, 4th Edition, Butterworth-Heinemann, 2018.					
Supplementary Reading	- V Raghavan, “Materials Science and Engineering: A First Course, 5th Ed, 2007, PHI India. - Donald R. Askeland K Balani, “The Science and Engineering of Materials,” 7th Edition, Cengage Learning, 2016. - Michael Ashby, “Materials Selection in Mechanical Design”, 5th Edition, Butterwoth-Heinemann, 2016.					

Course Name	Foundation for Engineering and Product Design	Course Code	DS1000			
Offered by Department	SIDI	Structure (LTPC)	1	2	0	3
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate -43			
Learning Objectives	The objective of this foundation program is to help students coming from +2 background to: • Unlearn limiting assumptions, risk avoidance, fear of failure • Awaken their senses & rediscover their creative selves • Experience the impact of design and technology in everyday objects					
Learning Outcomes	At the end the course, the student should • demonstrate qualities of immersion in a task; • unlearn key limiting assumptions; • become comfortable with sketch-thinking and develop skills in design sketching; • be excited by the potential of technology and design in improving lives;					
Contents of the course (With approximate break up of hours)	Module-1: Induction: (5 hrs.) • History of the place; the industrial ecosystem; institution • Exercises to improve interaction; local visits; Module-2: Learn to observe nature and self (12 hrs) • Know your context - physical and social; • Unlearning activities; Start journaling • Observe wholes-parts (trees-leaves); variety of leaves; colors • Document in a variety of ways - collage; sketch, paint, photograph, video Module-3: Learn to observe everyday objects (15 hrs) • Unbundle everyday objects, observe, reorganize • Whole-part relations; System physics; • Observe interplay of art, design, culture, technology in everyday objects Module-4: Visualize and Realize 3D objects (15 hrs) • Introduction to design sketching-1 (paper/pencil) • Concepts of perspective drawing and product sketching. • Introduction to color theory - mixing of colors to get different shades • Explore variations on the form of chosen objects • Realize designs with tools/materials (Origami; Clay; Foam cutting; Laser cutting; Glues) • Introduction to digital sketching & 3D printing Evaluation: Continuous assessment (80%); Final Form Designs Presentation (20%)					
Essential&Supplementary Reading	1. Kevin Henry, Drawing for Product Designers, Laurence King Publishing, 2012, ISBN:9781856697439 2. KoosEissen and RoselienSteur, Sketching – The Basics, BIS Publishers, 2011, ISBN:9789063695347 3. Thomas C Wang, Pencil Sketching, John Wiley, 2002, ISBN:9780471218050 4. Wucius Wong, Principles of Color Design: Designing with Electronic Color, John Wiley, 2nd Edition, 1996, ISBN:9780471287087					

Course Name	EngineeringElectromagneticsPractice	Course Code	PH1001			
Offered by Department	SH-Physics	Structure(LTPC)	0	0	3	1.5
To be offered for	B.Tech	Course Type	Core			
Pre-requisite	NIL	Approved In	Senate-43			
Learning Objectives	The objective of this course is to give a hand on experience how the electromagnetic wave behavesin different situations. The students will be able to relate the knowledge they have got in the theoryclass with their experience. This course will enhance their skill of handling instruments and thepresentationof the results obtainedfromtheexperiments.					
Contents of thecourse	Electricalandmagneticpropertiesofmaterialsbasedontheconceptofelectricalpolarization,magneti zationofmaterials willbe studiedin variousexperiments. Experimentsbasedonthe conceptof phenomenonasuchasininterference,diffractionetc.relatedtoelectromagneticwaveswillbedoneherean dthesemethodswillbeappliedtomeasuresomeunknown physical quantities such as wavelength of a light, diameter of a very thin wire, very smallapertureforlightetc.					
Essential Reading	1.IITD&MLaboratorymanualforElectromagneticWavePractice					
Supplementary Reading	1.W.H.Hayt andJ. A.Buck,EngineeringElectromagnetics,TataMcFrawHill EducationPvt. Ltd,2006.					

Course Name	Problem Solving and Programming Practice	Course Code	CS1001			
Offered by Department	Computer Science Engineering	Structure (LTPC)	0	0	3	1.5
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-43			
Learning Objectives	Focus is on problem solving using computers with C programming as the language. The sequence, selection and repetition statements in C programming language shall be discussed with case studies.					
Learning Outcomes	The teaching and assessment shall ensure that given a computational problem, students can use computers as a tool to model and solve the problem. Writing pseudo codes and C programming using basic programming constructs are expected out of the students. Students are expected to be conversant in number conversions and representations.					
Course Contents (with approximate breakup of hours for lecture/ tutorial/practice)	• Introduction to text editors - basic text processing - case studies involving office software - doc and ppt creation • Introduction to Linux commands - file/directory creation - copy, move, pdf creation, zip commands • Case studies using sequence statements - input/output statements - arithmetic with precedence and associativity. • Case studies involving selection and repetition statements - functions – recursion					
Essential Reading	Deitel P J and Deitel H M, C : How To Program, Prentice Hall, 7th Edn, 2012.					
Supplementary Reading	Kernighan, Ritchie D, The C Programming Language, Prentice Hall, 2 Edn., 1988					

Course Name	Effective Language and Communication Skills	Course Code	HS1000			
Offered by Department	SH- English	Structure(LTPC)	1	0	2	2
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-43			
Learning Objectives	• Hone LSRW and practice critical thinking • Enable students to speak and write grammatically acceptable sentences • Train students in technical communication • Cultivate interest to learn language and to build the confidence to communicate in English • Develop an interest in updating their language skills through continuous learning • Connecting personal growth with improvement in their proficiency in English					
Learning Outcomes	• Able to communicate effectively with grammatically acceptable constructions and appropriate words in formal and informal situations • Can extract information effectively and able to think critically • Able to present technical content confidently					
Course Contents(with approximate breakup of hours for lecture/ tutorial/ be done practice)	• Introduction: Language, effective communication, ethics and aesthetics of communication (L1) • Phonetics – sounds, pronunciation of words, stress, intonation, listening, Varieties of English (L3, P4) • Sentence structure, concord, punctuation, stylistic errors, common errors (L3, P4) • Reading and comprehension (L2, P5) ➤ Different types of reading, analyzing the organization of the text ➤ Critical thinking- thesis statement, argument, hypothesis, order, reason, evidence, consistency, tautology, conclusion • Exercises for vocabulary enrichment (for daily practice) • Speaking (L2, P5) ➤ Barriers to effective communication, technical presentation and presentation skills, self-introduction, ➤ Requests, enquiry, suggestion in formal and informal situations, reporting an event, group presentation – debate • Writing (L3, P8) ➤ Writing formal letters, email, résumé, ➤ Data interpretation, reports, product description/requirements/ technical instructions, recording observations ➤ The language of content strategy - voice and tone strategy - the language of localization – text analysis tools ➤ Plagiarism – the importance of documentation, different methods of note-taking ➤ Essays/story/ book & movie reviews/writing for social media/blogging/ journaling • Life lessons through stories and activities (P2)					
Essential & Supplementary Reading	1. Tebeaux, Elizabeth, and Sam Dragga. <i>The Essentials of Technical Communication</i>. OUP, 2018. 2. Rizvi, M Ashraf. <i>Effective Technical Communication</i>. McGraw-Hill, 2017 3. Hancock, Mark. <i>English Pronunciation in Use: Intermediate Self-study and Classroom Use</i>. CUP, 2012. 4. Cottrell, Stella. <i>Critical Thinking Skills: Developing Effective Argument and Analysis</i>. Palgrave, 2005. 5. Gower, Roger. <i>Grammar in Practice</i>. CUP, 2005. 6. Paterson, Ken. <i>Oxford Living Grammar</i>. OUP, 2014. 7. Sabin, William A. <i>The Gregg Reference Manual: A Manual of Style, Grammar, Usage, and Formatting</i>. McGraw-Hill, 2011. 8. Fitikides, T. J. <i>Common Mistakes in English</i>. London: Orient Longman, 1984.

Course Name	Differential Equations	Course Code	MA1001			
Offered by Department	SH-Mathematics	Structure (LTPC)	3	1	0	3
To be offered for	B.Tech	Course Type	Core			
Pre-requisite	NIL	Approved In	Senate-44			
Learning Objectives	To provide an exposure to the theory of ODEs & PDEs and the solution techniques.					
Contents of the course	Linear ordinary differential equations with constant coefficients, method of variation of parameters – Linear systems of ordinary differential equations (10) Power series solution of ordinary differential equations and Singular points Bessel and Legendre differential equations; properties of Bessel functions and Legendre Polynomials (12) Fourier series (6) Laplace transforms elementary properties of Laplace transforms, inversion by partial fractions, convolution theorem and its applications to ordinary differential equations (6) Introduction to partial differential equations, wave equation, heat equation, diffusion equation(8)					
Essential Readings	1. Simmons. G.F, Differential Equations, Tata McGraw Hill, 2003. 2. Kreyszig. E, Advanced Engineering Mathematics, Wiley, 2007.					
Supplementary Reading	1. William. E. Boyce and R. C. DiPrima, Elementary Differential Equations and Boundary Value Problems, John Wiley, 8 Edn, 2004. 2. Sneddon. I, Elements of Partial Differential Equations, Tata McGraw Hill, 1972. 3. Ross. L.S, Differential Equations, Wiley, 2007. 4. Trench, W, Elementary Differential Equations, http://digitalcommons.trinity.edu/mono					

Course Name	EngineeringGraphics	Course Code	ME1001			
Offered by Department	MechanicalEngineering	Structure(LTPC)	2	0	4	4
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
LearningObjectives	• Tointroducethebasicconceptsandtechniquesoftechnicaldrawing. • 2D and 3D representation of various shapes/objects and its engineeringapplications.					
LearningOutcomes	Students will acquire visualization skills and will be able to prepare technicaldrawingsand 3Dmodels usingcomputer aidedtools.					
Course Contents(with approximatebreak up of hours forlecture/tutorial/ practice)	• Roleoftechnicaldrawinginproductdevelopmentprocess,Basicsoftechnicaldrawing,Stand ards, Dimensioningprinciples.(L2+P4hrs.) • Computeraideddrafting.(L2+P8hrs.) • Engineeringcurvesanditsapplications. (L4+P8hrs.) • Principles of orthographic projection. Orthographic projection of points, lines,planes and regular solids, Exercises related to engineering applications. (L7+P8hrs.) • Principlesofisometricprojections.Orthographicto isometricandisometrictoorthographict ransformation ofobjects.(L3+P8hrs.) • Sectionandintersectionofregularsolidsandtheirlateraldevelopments. • (L6+P12hrs.) • Introduction to 3D modelling of shapes and objects; electrical CAD. (L2+P4hrs.)					
Essential Reading	1. K.Venugopal andVPrabhuRaja,EngineeringDrawing+AutoCAD,NewAgeInternational (P)Limited.5th EditionReprint:July, 2016 2. Narayana.K.L,andKannaiah.P,EngineeringDrawing,ScitechPub.Pvt.Ltd, 3. 3rdEdition.					
Supplementa ryReading	1. PIVarghese,EngineeringGraphics,McGrawHillEducation,2013. 2. Bhatt.N.D,EngineeringDrawing– PlaneandSolidGeometry,CharotarPublishingHouse Pvt. Ltd.,53 Edition 2014.					

CourseName	ElementaryDataStructures andLogicalThinking	CourseCode	CS1002			
Offered by Department	Computer Science Engineering	Structure(LTPC)	3	0	0	3
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
LearningObjectives	Thefocusisto discuss howdataisorganizedandretrievedin computers.Elementarydatastructureswithsupportingoperationsshallbediscussed.Studentswillbeex posed toart of logical thinkingthroughalgorithmicpuzzles.					
LearningOutcomes	At the end of the course, given a computational problem, students are expected tocomeupwithanalgorithmmandasuitabledatastructure,andimplement thesame usingaprogramminglanguage.					
Course Contents(with approximatebreakup of hours forlecture/tutorial/pr actice)	- HistoryofComputingandComputers–theneedfordataorganization–introductionto abstract data types anddata structures(3L) - Introduction to logical thinking (algorithmic thinking) through simple examples.Introduction to Elementary data structures - Discussion on Stacks and Queueswithsupportingoperations– implementationusingarraysandlists–implementation of stack using queues and vice-versa – variants of stacks andqueues– algorithmic puzzles (10L) - Arraysandapplications-algorithmicpuzzlesinvolvingarrays-sortingandsearching.(8L) - Discussiononlinkedlistswithvarioussupportingoperations-algorithmicpuzzles involving lists.Types of Lists – double, circular – the need for doubleandcircular linked lists–puzzles involvinglists (10L) - Introductionto trees,binarytrees,searchtrees (7L) - Applications of elementary data structures in computer science and engineering.(7L)					
Essential Reading	1. M. A. Weiss,DataStructuresand Algorithm AnalysisinC, 2 nd ed.,Pearson,2002. 2. AnanyLevitinandMariaLevitin,AlgorithmicPuzzles,OxfordUniversityPress,2011.					
Supplementary Reading	1.NarasimhaKarumanchi,DataStructureandAlgorithmicThinkingwithPython,CareermonkPublicati ons, 2017					

Course Name	SociologyofDesign	Course Code	DS1001			
Offered by Department	SIDI	Structure (LTPC)	1	2	0	3
To be offered for	B.Tech	Course Type	Core			
Prerequisite	FoundationProgram	Approved In	Senate 43			
Learning objectives	The objective of the course is to introduce engineering students tothe importance of understanding the social context of technologyandproductdesign: • Observing the problem context and surfacing unstateduser/customerneeds/newproductconcepts, • Understanding people, team dynamics and working in multicultural /cross-functional/distributed teams.					
CourseOutcomes	Attheend ofthecourse,thestudentsshould beinaposition to: • Understandtheneedandtheprocessofdoinganethnographicstudy • Surfaceunstatedneeds andarticulate thehighlevel productrequirements • Connectwith people,formteams andcollaborate towardsacommongoal					
Contents of the course(With approx. mate breakupofhours)	Module1:Technology,DesignandSociety-[9hrs] • Observehewaypeopleinteract withobjects • Understandingthe relationship betweenpeopleandavarietyofobjects • ActorNetworkTheory;HistoryofTechnologyandDesign;2-3Casesudies • Discoveryourpassionanddomainofinterest&networktoidentifypartners Module2:Understandinguser/customercontexts[21hrs] • Ethnography-immersioninaproblemcontext • Learningtoobserve-seeandlisten; • Developingrichpictures;Gigamapping • Introductiontosignsandsemioticanalysis Module3:Understandinggroups(multicultural/cross-functionalteams)[12hrs] • Learningteamformationanddynamicsthroughamovie; • Introduction to sociological imagination - Functionalism, ConflictTheory,SymbolicInteractionism;InteractionRitualChains • Values,culture, methodsofengineersanddesignersandhowtheyshapethequalityof our lives; • Groupdynamicswithinorganizationsandacrossorganizationsandim plications for innovationandchange Evaluation:Continuousassessment(40%);Finalethnographyreport(20%);End Semester(40%)

Course Name	DesignandManufacturingLab.	Course Code	ID1000			
Offered by Department	SIDI	Structure(LTPC)	0	0	2	1
To be offered for	B. Tech	Course Type	Core			
Pre-requisite	NIL	Approved In	Senate-44			
Learning Objectives	The objective of this course is to give an exposure on the basic practices followed in the domain of mechanical, electrical, electronics and communication engineering. The exercises will train the students to acquire skills which are very essential for the engineer through hands-on sessions.					
Contents of the course	Experiments will be framed to train the students in following common engineering practices: Basic manufacturing processes: Fitting, Drilling & tapping, Material joining processes, Carpentry, Sheet-metal work, Adhesive bonding and plastic welding, Arc Welding, 3D Printing. (10 hours) Familiarization of electronic components by Nomenclature, meters, power supplies, function generators and Oscilloscope – Bread board assembling of simple circuits: IR transmitter and receiver – LED emergency lamp – Communication study: amplitude modulation and demodulation. (6 hours) Domestic wiring practice: Fluorescent lamp connection, Staircase wiring – Estimation and costing of domestic and industrial wiring – power consumption by Incandescent, CFL and LED lamps. (2 Hours) Dismantle and assembly of PC. Installing OS and disk management. (4 hours)					
Essential Reading	1. Uppal S.L., “Electrical Wiring & Estimating”, 5 Edn, Khanna Publishers, 2003. 2. Chapman. W.A.J., Workshop Technology, Part 1 & 2, Taylor & Francis.					
Supplementary Reading	1. Clyde F. Coombs, “Printed circuit hand book”, 6 Edn, McGraw Hill, 2007. 2. John H. Watt, Terrell Croft, “American Electricians' Handbook: A Reference Book for the Practical Electrical Man”, Tata McGraw Hill, 2002.					

CourseName	Applied Mechanics	CourseCode	ME1002			
Offered by Department	MechanicalEngineering	Structure(LTPC)	3	0	0	3
To be offered for	B.Tech	Course Type	Core			
Prerequisite	MaterialsforEngineers	Approved In	Senate -44			
LearningObjectives	Thiscourseisintendedto give an understandingof - the forceandmomentsystems onmechanicalstructures - the equationsgoverningrigid bodysystems - the behaviorofsolidbodiessubjected to varioustypes ofloads. - theconnectionbetweenthepropertiesofmaterialsandthe behaviorofphysicalsystems.					
LearningOutcomes	Atthecompletionofthecourse,thestudentwillbeable to - analyze theinteractions ofvariousstructuralelements - applytheprinciplesto practicalstructuralanalysis - carryoutdesign andfailureanalyses ofbasicmechanicalstructures.					
CourseContents(with approximatebreakup ofhoursforlecture/tutorial/practice)	- Engineeringmechanics: - Equivalentforcesystems,freebodyconcepts,equationsofequilibrium;Trusses (L12) - Strengthofmaterials: - stress,strainandtheirrelationforsimpletension,compressionandshear;Axialload;Torsion (L9) - Bending– Shearforceand Bendingmoment,Stresses,Deflection;Euler’stheoryofcolumns (L9) - Analysis ofstress and strain– Transformations,Principalstresses andstrains,Planestress,Mohr’scircle;Thincylinders;Theoriesoffailure. (L12)

Course Name	Elementary Data Structures And Logical Thinking Practice	Course Code	CS1003			
Offered by Department	Computer Science Engineering	Structure(LTPC)	0	0	4	2
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
Learning Objectives	• The focus is to discuss how data is organized and retrieved in computers. • Elementary data structures with supporting operations shall be discussed. Students will be exposed to a part of logical thinking through algorithmic puzzles.					
Learning Outcomes	At the end of the course, given a computational problem, students are expected to come up with an algorithm and a suitable data structure, and implement the same using a programming language.					
Course Contents(with approximate breakup of hours for lecture/tutorial/practice)	• Case studies that motivate logical thinking (algorithmic thinking) – implementation using C programming • Case studies involving arrays and implementation - Arrays with various supporting operations- algorithmic puzzles involving arrays – sorting and searching • Examples on linked lists with various supporting operations- algorithmic puzzles involving singly, doubly and circular linked lists. – puzzles involving lists • Case studies on Stacks and Queues with supporting operations – implementation using arrays and lists – implementation of stack using queues and vice-versa – variants of stacks and queues – algorithmic puzzles • Applications of elementary data structures in computer science and engineering and implementation					
Essential Reading	1. M. A. Weiss, Data Structures and Algorithm Analysis in C, 2 nd ed., Pearson, 2002. 2. Anany Levitin and Maria Levitin, Algorithmic Puzzles, Oxford University Press, 2011					
Supplementary Reading	1. Narasimha Karumanchi, Data Structure and Algorithmic Thinking with Python, Careermonk Publications, 2017

CourseName	TheoryofMachinesandDesign	Course Code	ME2011			
Offered by Department	MechanicalEngineering	Structure(LTPC)	3	0	0	3
To be offered for	B.Tech	Course Type	Core			
Prerequisite	AppliedMechanics	Approved In	Senate-44			
LearningObjectives	• Tounderstandthe kinematicsandkinetics of various planar mechanisms. • Tounderstand design concepts and procedures necessary to design and/or select a machine component in terms of geometry and materials.					
LearningOutcomes	At the end of the course, a student will be able to: • Investigate the motion of planar mechanisms using graphical and analytic methods. • Apply multidimensional failure criteria in the analysis and design of machine components. • Design of power transmission systems involving shafts, gears, belts and bearings.					
CourseContents	•Introduction to mechanisms- joints, pairs and couplings; Constraints, mobility and degree of freedom, mobility criterion, Grashof's law. (6L) •Analysis of Planar Mechanism (Position, Velocity and Acceleration); Cams and Followers. (8L) •Design based on Failure theories; Design of Shafts, Keys and Couplings. (8L) Design of Joints- Bolted, Riveted and Welded Joints (8L) •Design of Spur Gears and Belt Drives (6L) • Design of Clutches and Bearings (6L)

CourseName	Electrical Drives	Course Code	EC2055			
Offered by Department	Electronics &Communication Engineering	Structure(LTPC)	2	0	0	2
To be offered for	B.Tech.	Course Type	Core			
Prerequisite	Basic Electrical Engineering	Approved In	Senate-44			
LearningObjectives	● In this course fundamental applications of electromechanical and power electronic systems will be studied as applied to mechanical systems. ● The capabilities and limitations of different types of electric machines (e.g., permanent magnet, induction) in various drive applications will be covered					
LearningOutcomes	At the end of the course, a student will be able to, ● Understand how power electronic rectifiers, converters and inverters operate. ● Possess an understanding of control of electrical drives. ● Analyze and compare the performance of DC and AC machines. ● Select and design a suitable drive system for the given application.					
CourseContents	Energy conversion principles, Introduction to Electrical Drives, controlled Rectifiers, DC/DC converters, inverters (L6)					
	Characteristics and control (starting, braking and speed control-static methods only) of Basic machine types: DC motor (L8)					
	Three phase Induction motor (L8)					
	BLDC motor (L3)					
	Servo motor, torque motor, stepper motor (L3)					
EssentialReading	3. Gopal K. Dubey, Fundamentals of Electrical Drives, 2 nd edition, Narosa, January 2010, ISBN-13: 978-8173194283 4. Ned Mohan, Electric Machines and Drives: A First Course, 1 st edition, Wiley, 2012.

To be offered for	B.Tech.	Course Type	Core			
Prerequisite	Basic Electrical Engineering	Approved In	Senate-44			
LearningObjectives	- To introduce the students to conventional and static methods to control various AC and DC drives used in Industry. - Also to deliver a thorough understanding on feedback control via interfacing various sensors for an automated system.					
LearningOutcomes	At the end of the course, a student will be able to, - Select proper sensors, electrical drive, signal conditioning circuit and controller for the required automation. - Design control algorithms for electric drives which achieve the regulation of torque, speed, or position in the above machines. - Develop Simulink® models which dynamically simulate electric machine and drive systems and their controllers.					
CourseContents	Experiments conducted in this course: - Various sensors incorporated with an understanding and hands on study towards Signal conditioning, Characteristics of Transducers, Calibration of sensors, and Measurement of various physical quantities. - Brings out the basic concepts of different types of electrical machines and their performance. - Introduce the concept of control of conventional electric motors such as DC motor, AC Induction motor and also special machines such as Stepper motor, Permanent magnet brushless motors, Servo motor. - Familiarize various power electronic converters and static control of drives. - Introduces Speed-Torque characteristics of various types of load and drive motors.					
EssentialReading	1. IITDM Kancheepuram Electrical Drives Practice Manual					
Supplementary Reading	- Gopal K. Dubey, Fundamentals of Electrical Drives, 2nd edition, Narosa, January 2010, ISBN-13 : 978-8173194283 R. Krishnan, “Electric Motor Drives: Modeling, Analysis, and Control,” Prentice Hall, 2001. - Ned Mohan, Electric Machines and Drives: A First Course, 1st edition, Wiley, 2012.					

Course Name	Smart ProductDesign	Course Code	DS2001			
Offered by Department	SIDI	Structure (LTPC)	1	2	0	3
To be offered for	B. Tech	Course Type	Core			
Prerequisite	SystemsThinking forDesign	Approved In	Senate-43			
Learning Objectives	The objective of this course to help the students understand and apply the concepts of designing smart/intelligent products, i.e., information intensive and contextsensitive					
Learning Outcomes	At the end of the course, the students will: - Identify and define the right type of intelligent behavior for a chosenproduct concept - Design high-level functional and component (structural) architecture forintelligent behavior using appropriate metaphor and analogy - Evaluate and select the right AI technique for the proposed functional andcomponent architecture and vice versa					
Course Contents (with approximate breakup of hours for lecture/ tutorial/practice)	Module 1: Introduction to intelligence behavior (9 hours) - Definition of intelligence - Dimensions of intelligence - Levels of intelligence Module 2: Architecture for intelligent behaviour (15 hours) - Functional arch for Intelligent Behaviour (Intelligence and information intensity relation (equilibrium, amplification)) - Biological metaphors for cyber-physical systems (Bio-inspired adaptive systems (Positive and negative feedback) - Theory of living systems (Self evolve, self-improve, self-aware (e.g., self-configuration, -organization, -optimization) properties) Module 3: Selection of appropriate AI Techniques (18 hours) Rule-based systems - Fuzzy inferencing - Artificial neural networks - - Evolutionary computation - - determine which type of intelligent system methodology would be suitable for a given type of application problem - Demonstrate a working prototype, in the form of a major project work, the ability to design and develop an intelligent system for a selected application. - Poster Session - Evaluation: Continuous assessment (40%); Final concept presentation (20%); EndSem(40%)

Course Name	Thermal and Fluids Engineering	Course Code	ME2014			
Offered by Department	Mechanical Engineering	Structure (LTPC)	3	1	0	4
To be offered for	B.Tech.	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
LearningObjectives	- To introduce different concepts and governing equations for thermodynamics and fluid mechanics. - To apply the learned concepts to a few real-life cases.					
LearningOutcomes	At the end of this course the students will be able to - Understand and apply the concepts of thermodynamics, <u>fluid</u> mechanics and heat transfer. - Analyze different thermodynamic cycles used in practical cases. - Solve various basic fluid mechanics and heat transfer problems as a foundation for advance courses					
CourseContents	Thermodynamics (L8+T3) Laws of thermodynamics - zeroth, first and second, concept of temperature, energy, and entropy, Calculations for work and heat transfer for a system and control volume Fluid Mechanics (L18+T6) Fluid properties – Density, viscosity, surface tension, capillary action Fluid statics, concepts of pressure, stability of submerged and floating object Fluid Dynamics – Lagrangian and Eulerian definition, concept of velocity and acceleration, equations of continuity and momentum, Bernoulli's equation, flow through pipes, laminar and turbulent flows, Dimensionless analysis Heat Transfer (L16+T5) Conduction – Fourier law, 1-D conduction, rectangular and polar coordinate system, insulation, Convection – forced convection, natural convection, thermal and hydraulic boundary layer Radiation – basic concepts and application					
EssentialReading	1. YunusCengel; Robert Turner, Fundamentals of Thermal-Fluid Sciences, McGraw-Hill Higher Education, 3rd edition 2008.					
SupplementaryReading	1. Cengel, Y.A. and Boles, M.A., 2007. <i>Thermodynamics: An Engineering Approach 6th Edition (SI Units)</i> . The McGraw-Hill Companies, Inc., New York. 2. <i>Introduction to fluid mechanics and fluid machines</i> , S Som, G Biswash, S Chakraborty, 3e. Tata McGraw-Hill Education, 2017. 3. Bergman, T.L., Incropera, F.P., Lavine, A.S. and Dewitt, D.P., 2011. <i>Introduction to heat transfer</i> . John Wiley & Sons.					

CourseName	OperationsResearch	Course Code	ME2015			
Offered by Department	MechanicalEngineering	Structure(LTPC)	3	0	0	3
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved By	Senate-44			
LearningObjectives	● To learn various tools and quantitative techniques for solving business decision problems and finding optimal solutions and build capabilities in students to analyze different problematics scenarios in industries involving limited resources and effective decision making					
LearningOutcomes	● Ability to understand and analyze the real life operational problems which involves resource constraints ● Ability to formulate mathematical model to various Industrial/business decision problems ● Ability to use appropriate tools and techniques to solve various Industrial/business decision problems, determine the optimal solution and to make effective business decisions.					
CourseContents(with a pproximate breakup of hours for lecture/tutorial/practice)	Introduction to OR: Role of Operations research in decision-making, types of OR Techniques, and constructing the model. (L2) Linear Programming: Introduction, Assumptions, Formulation of LP Problem, Applications and Limitations (L4) Linear Programming Techniques: Graphical Method, Algebraic method, Simplex Method, Big M method, Two phase method, Degeneracy, Alternate Optimum, unboundedness, infeasibility, LP Solvers (L10) Duality and Sensitivity Analysis: Importance of Duality concepts, Formulation of Dual problems, Dual Simplex, Sensitivity Analysis (L4) Transportation Problem: Least cost method, North West corner rule, Vogel's approximation method, MODI method, degeneracy in transportation model, unbalanced and maximization models. (L6) Assignment Problem: Difference between transportation problem and assignment problem, Hungarian algorithm, unbalanced assignment problems, Routing Problems, traveling salesman problem (L6) Integer Programming Problem: Introduction, Types of IPP, Formulation, rounding off Algorithm, Branch and Bound Algorithm (L4) Project Scheduling: Basic terminologies, constructing a project network, CPM and PERT (L4) Queuing models: Notation of queues, performance measures, The M/M/1 and M/M/m queue (L3) Production Scheduling: Single Machine Flow shop and Job Shop Scheduling (L2)					
EssentialReading	1. Hamdy ATaha, "Operations Research– An Introduction", Pearson Education, New Delhi, 2014. 2. G. Srinivasan, Operations Research Principles and Applications, PHI, 3 rd Edition 3. R. Paneerselvam, Operations Research, PHI, 2 nd Edition					
SupplementaryReading	1. A. Ravindran, D. T. Phillips, J. Solberg Operation Research: Principles and Practice, Wiley Edition, New York. 2. Frederick S. Hiller and Gerald J. Lieberman, Inroduction to Operations Research, McGraw-Hill, 2012					

CourseName	Production Drawing Practice	CourseCode	ME2016			
Offered by Department	MechanicalEngineering	Structure(LTPC)	0	0	3	1.5
To be offered for	B.Tech.	Course Type	Core			
Prerequisite	Basics ofEngineeringGraphics	Approved In	Senate-44			
LearningObjectives	Developthenecessaryskills to prepareproductiondrawings and 3D modelling					
LearningOutcomes	At the end of the course, a student will be able to: - Represent and understand drawing symbols and geometric dimensioning and tolerance - Create 3D models of parts and assembly, and exploded views of assembly using CAD software - Prepare production drawings of machine components					
CourseContents	Representation: Layout of drawing sheet, title block, conventional representation of materials, machine components, welding symbols, hydraulic, pneumatic symbols, surface roughness symbols. (P9) Limits, Fits and Tolerances: Types of fits, exercises involving selection/interpretation of fits and estimation of limits from tables. (P3) Form and Positional Tolerances: Introduction and indication of the tolerances of form and position on drawings, deformation of runout and total runout and their indication. (P6) 3D Part Modelling and Assembly: Development of 3D models of machine components using CAD software, assembly of machine components and drafting of assembly using CAD software with fits. (P9) Production Drawings: Creation of production drawings of parts with indications of size, dimensional and geometric tolerances, welding and surface roughness symbols, form and position errors using CAD software. (P12)					
EssentialReading	1. G. Bertoline, E. Wiebe, N. Hartman and W. Ross, Technical Graphics Communication, 4th edition, Tata McGraw Hill, 2008.					
SupplementaryReading	1. J.D.Meadows,GeometricDimensioningandTolerancing,CRC Press,2009.

Course Name	Introduction to Data Science for Engineers	Course Code	CS3006			
Offered by Department	Computer Science and Engineering	Structure (LTPC)	3	0	2	4
To be offered for	B.Tech	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
Learning Objectives	This course covers the basic concepts of Data Science to help the student to learn, understand and practice data analytics encompassing concepts from descriptive, inferential statistics and predictive techniques and big data concepts.					
Learning Outcomes	• Ability to identify the characteristics of datasets; Ability to select and implement machine learning techniques suitable for the respective application; • Ability to solve problems associated with big data characteristics such as high dimensionality; • Ability to integrate machine learning libraries and mathematical and statistical tools					
Course Contents (with approximate breakup of hours for lecture/ tutorial/practice)	• Introduction to relevant industry applications and analytics – Descriptive Statistics – Data Visualization & Interpretation -Measures of Central Tendency & Dispersion - Basic and advanced plots such as Stem-Leaf Plots, Histograms, Pie charts, Box Plots, Violin Plots etc. – Merits of Demerits & Interpretation (10) • Inferential Statistics – Hypothesis Testing - Tests of Significance – Analysis of Variance - Regression – Linear and Logistic (8) • Predictive Analytics – Supervised and Unsupervised – Association Rules, Classification, Clustering, Outlier Analysis, Time Series Modeling (14) • Big Data Characteristics – Map Reduce – Deduplication, Distributed Storage, Implementation using Hadoop / Spark platforms (8) • Practice Component: Concepts from Descriptive Statistics, Inferential and Predictive Analytics would be test driven using platforms such as Python, R etc. ML support in these platforms for rule mining and application, classification & clustering algorithms etc. would also be test driven as part of the practice exercises. Modern technologies for big data handling such as Spark – support for Map reduce would also be test driven. Applications relevant to the student's stream of specialization would be explored for exercises / course project as case studies. (14 sessions – weekly exercises)

Course Name	Operations and Supply Chain Management	Course Code	ME3004			
Offered by Department	Mechanical Engineering	Structure (LTPC)	3	0	0	3
To be offered for	B.Tech.	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
Learning Objectives	- The course aims to provide an in-depth coverage of operations management and supply chain management. - Students will be exposed to various aspects such as production planning, forecasting, regression analysis, transportation models, topics in supply chain etc.					
Learning Outcomes	The course would equip students with skills required for effective decision making and management					
Course Contents (with approximate break up of hours for lecture/tutorial/practice)	Operations Management: Introduction, Types of Production Systems, Facility location and layout techniques. Materials Requirement Planning (MRP). (L3) Production Scheduling- Single machine, Flow shop. Work Study- Method Study- Recording Techniques- Therblig- SIMO chart. Forecasting methods- Qualitative methods, Quantitative Models- Time series forecasting models, moving averages, exponential smoothing with trend and seasonal adjustment, multi-item forecasting, Simple and multiple linear regression models (L11) Network Design in Supply Chain: Introduction to Supply chain, Role of distribution in supply chain- network design in the supply chain- models for facility location and capacity allocation- Impact of uncertainty on network design. Inventory (L10) Management in Supply Chain: Cycle inventory- multi-echelon inventory- safety stock in the supply chain- safety level estimation, supply uncertainty, data aggregation, replenishment policies, managing safety, inventory in practice- product availability- optimal level, affecting factors, supply chain contracts. (L13) Transportation in Supply Chain: Design options for Transportation network, trade-offs,					
Essential Reading	- S.L. Davi, K. Philip and S.L. Edith, Designing and Managing the Supply Chain, Tata McGraw- Hill, 2003. R. Panneerselvam, Production and operations management, Prentice- Hall of India, 2010					
Supplementary Reading	A. Ravi Ravindran , Operations Research and Management Science Handbook, 1st Edition., 2007 by CRC Press					

Course Name	Robotics and Automation	Course Code	ME3005			
Offered by Department	Mechanical Engineering	Structure (LTPC)	3	0	0	3
To be offered for	B.Tech.	Status	Core			
Pre-requisite	NIL	Approved In	Senate-44			
Learning Objectives	To introduce the students to various state of art automation technologies in manufacturing and the role of robots in automation.					
Learning Outcomes	At the end of the course, a student will be able to • Design robots with application in manufacturing automation. • Automate a manufacturing system with various sensors, actuators and controllers.					
Contents of the course (With approximate break up of hours)	Automation Systems-Overview: Overview of mechatronic and automation systems and devices, automated feeding, transfer, retrieval mechanisms and devices, AGVs, FMS workstations, material handling and storage systems, overview of sensors, transducers, control systems and microfluidic devices in automation. (7 L)					
	Robots in Automation: Robot classification and anatomy, forward and inverse kinematics, DH matrix transformation, Jacobian and differential motion, Trajectory planning, Static and dynamic analysis, Grippers and other hardware, Vision systems, Mobile and parallel robots. (15 L)					
	Pneumatic Systems: Production, distribution and conditioning of compressed air, system components and graphic representations, design of pneumatic circuits. (7 L)					
	Hydraulic Systems: Hydraulic systems: flow, pressure and direction control valves, actuators, supporting and control elements, pumps, servo valves and actuators, proportional valves and their applications, design of hydraulic and performance analysis. (7 L)					
	Controllers: Types, Force feedback, Visitation-assisted robot control, Programming and PLC interfacing, IoT enabling. (7 L)					
Essential Reading	1. Anthony Esposito, Fluid power with applications, 7 th Edn., 2014, Prentice Hall. 2. M P. Course Name	Prototyping & Testing	Course Code	DS3001			
Offered by Department	SIDI	Structure(LT PC)	1	2	0	3
To be offered for	B.Tech	Course Type	Elective			
Prerequisite	NIL	Approved In	Senate-43			
Learning Objectives	The objective of the course is to help students develop rapid prototyping skills and realize a minimum viable product					
Learning Outcomes	Students will develop skills in rapid prototyping; project management and focusing on delivering outcomes					
Course Contents (with approximate breakup of hours for lecture/ tutorial/practice)	1. Minimum viable product plan(3hours) - Markets and Needs - Business Goals - Key features 2. Core Product Architecture(6hours) - Storyboarding of the product core. - Framework for mechanical, electronics and computing paradigm 3. Design for Manufacture & Assembly(3hours) - Manufacturing Process: Form - Assembly constraints: Fit 4. Developing the Proof of Concept(30hours) - Build - Assemble - Iterate - Validate - Pitch Evaluation: Continuous assessment(80%); Final PoC demo (20%) 2 one-day hackathons may be organized during this period (one weekends) to accelerate PoC development					
Essential & Supplementary Readings	1. How to Solve Big Problems and Test New Ideas in Just Five Days by Jake Knapp, John Zeratsky, Braden Kowitz 2. The Total Inventors Manual: Transform Your Idea into a Top-Selling Product by Sean Michael Ragan 3. Prototyping and Model making for Product Design by Bjarki Hallgrímsson Bringing a Hardware Product to Market: Navigating the Wild Ride from Concept to Mass Production by Elaine Chen					

Course Name	Professional Communication	Course Code	HS3000			
Offered by Department	SH-English	Structure (LTPC)	1	0	2	2
To be offered for	B.Tech.	Course Type	Core			
Prerequisite	NIL	Approved In	Senate-44			
Learning Objectives	• Develop the capability to apply for a job and participate in selection process • Acquire interview skills • Gain proficiency in language skills indispensable for a successful professional • Develop emotional intelligence					
Learning Outcomes	• Prepare résumé and cover letter • Ready to perform at different levels of the interview process • Able to use interpersonal skills in challenging situations • Competent to draft various documents for specific purposes					
Course Contents (with approximate breakup of hours for lecture/ tutorial/practice)	• Preparing cover letter, résumé, digital profile; video profile; Email etiquette (L2, P4) • Interview skills, Group discussion and impromptu speech (L2, P6) • Social communication skills (L4, P6) ➤ Conversational English appropriateness, context based <u>speaking</u> in general situations, discussion and associated vocabulary in professional situations) ➤ Non-verbal communication – relevance and effective use of paralinguistic features – body language, chronemics, haptics, proxemics ➤ Emotional intelligence (EI) and social intelligence at workplace – theoretical perspectives and their application in relevant workplace situations – EI and leadership skills – assessments and best practices in organizations • Conflict management and communication at workplace (L4,P6) ➤ Cross-cultural communication, Argumentation, negotiation, persuasion, decision making, case study of challenging situations ➤ Organizing a meeting, working as part of a team, briefing ➤ Business presentations – Preparing effective presentations, delivering presentations and handling questions • Writing proposals, statement of purpose, research article, agreements, summary Proofreading (L1, P4) • Training for proficiency assessment (L1,P2)
